

NEW: SR02 RENDER BEAD

The new SR02 Stainless Steel Render Bead combines the popular Rondo R02 render profile with high polish Stainless Steel, to produce an external cement render bead with exceptional corrosion resistance. >>

SR02 RENDER BEAD

After extensive research and analysis, the SR02 has been designed to provide contractors with both peace of mind, and an aesthetically pleasing finish on external cement render applications.

Manufactured in the same profile as the already popular R02 render bead for internal use, the SR02 Stainless Steel bead comes with a 2.5mm nib radius to produce a sharp, defined edge, and 60mm wings which will comfortably accept up to 25mm of render. A nailing strip also makes the product quick and easy to fasten.

The SR02 is suitable for virtually all exterior applications, and when installed correctly is covered by the full Rondo Warranty (limitations apply). Contractors can view the warranty and installation conditions at www.rondo.com.au
